Equivalent of "lspci" command in Windows ,

Hi , I am Aditya i need to print   PCI info of all PCI Bus connected devices on my machine &
redirect the information in to a file , i started using WIM , but i dont know how to get
information of all PCI BUS connected drivers by using WMI Command prompt ....please help me
out

Thanks
Aditya

There is no DOS in the NT operating system line, calling the command prompt DOS is a misnomer.
You can get the information at the command line with wmic (the WMI command-line tool). Please note that the wmic tool is not available on the XP Home version.
John

Use   DISKDRIVE for the disks and SCSICONTROLLER for the controller itself.
Enter /? at the prompt for more help.
You can get specific properties, for example:
DISKDRIVE GET SIZE
do DISKDRIVE GET /? for more help on the properties list
